Handylog

#### Part number: 4.3406.10.000

The Digital Anemometer `HandyLog` consists of an anemometer (wind speed transmitter) with firmly connected cable, and display device.

The anemometer is made of corrosion-free materials (aluminium, plastic). The display device is made of ABS plastic.

The Display device and the anemometer are powered by an integrated lithium-ion battery which can be recharged via the integrated mini USB connector.

The readings of each measuring are recorded in a dedicated file in ASCII- format. The memory size available for logging data is 4MB. Stored data can be transferred to PC by the use of the USB interface.

## **Specification**

#### Part number: 4.3406.10.000

Wind speed			
Type of sensor	4.3519.00.000 other sensors on request		
Data management			
Memory cycle	1 3600 s		
Format	CSV (Comma separated format)		
General			
Power supply	2600 mAh Li-lo rechargeablebattery		
Current load	6.5 mA operating current, 10μA standby current		
Ambient temp.	0 +60 °C		
Dosplay	LCD - Display; 5 - digits		
Protection	IP 54		
Dimension	160 x 90 x 25 mm (l x w x h)		
Weight	190 g		

Matirial housing
