## VIP-9000: Current to Pressure Transducer

The VIP-9000 is an I/P or V/P transducer for interfacing electronic control panels to pneumatic valves. A $4 \ldots 20 \mathrm{~mA}$ or $2 \ldots 10 \mathrm{VDC}$ input signal is converted into a $3 \ldots 15$ psi pneumatic signal to position dampers and valve actuators.

Quick panel mounting

- Easy wiring terminal blocks
- High accuracy

## Technical Data

Input signal: $4 \ldots 20 \mathrm{~mA}$ or $2 \ldots 10 \mathrm{VDC}$ (voltage signals must be capable of delivering 20 mA )
Output signal: $3 \ldots 15 \mathrm{psi}$
Required air supply: 20psi nominal, 30psi maximum; clean dry oil free air required
Air consumption for sizing: 0.008 scfm at 15 psi
Air capacity for air mains size: 16 scfm
Maximum air capacity: 515 scfm at 20psi supply
Linearity: $+/-1 \%$ of span
Hysteresis: $0.75 \%$ of span
Operating temperature: $-29 \ldots 60^{\circ} \mathrm{C}$
Storage temperature: $-40 \ldots 71^{\circ} \mathrm{C}$
Humidity: $5 \ldots 95 \% \mathrm{rH}$, non condensing
Dimensions (H x W x D): $3^{7 / 8 " \times 3 " \times 22^{1 / 2 "}}$
Connections: screw terminal and barbed fittings for 1/4" OD plastic tubing
Mounting: supplied with snap track for panel mounting, to be installed in upright position Factory Calibration: calibrated for $2 \ldots 10 \mathrm{~V}$ which equals $3 \ldots 15$ psi and $4 \ldots 20 \mathrm{~mA}$ which equals $3.6 \ldots 15$ psi. At 3 psi there is a small offset between voltage and current inputs, which provides reverse polarity protection and a ripple signal to the valve to remove hysteresis.

## Accessories

VIP-F10: Inline air filter

- Removal efficiency: 10 microns
- Filter area:1.71 in ${ }^{2}$
- Material: PE, PP
- Temperature: $0-80^{\circ} \mathrm{C}$
- Flow: 0.42 scfm
- Max. pressure: 65.3psi

Industry Usage
HVAC, Building automation, Energy management, Petrochemical
