

Aqua-Boy: DBMI

The DBMI is a highly accurate moisture meter containing two overlapping measuring ranges, from very dry to excessively moist. It is specifically designed to cover the entire moisture spectrum of construction materials. With instantaneous digital readings and compatible electrodes, this device has numerous applications for the construction and lumber industry.

Technical Data

Meter type: moisture meter

Measuring scale: 8...99%

Additional scale: none

Accuracy: +/- 0.1%

Reproducibility: 0.2%

Display: digital

Power supply: 9v battery

Products measured: agricultural products, construction products, cork, leather, paper, polystyrene, timber, wood

Dimensions (WxHxL): 115mm x 50mm x 170mm

Recommended electrodes: 200 d, 203 b, 203 d, 207, 208 223, 226

Industry Usage

Lumber, Construction

Ordering Data

DBMI

DBMI-K: moisture meter and includes: 200, 203 b, 204, 207, 226

299-DBMI: calibration resistor
